ALUNO(A): _____		NOTA:

Aula Prática 7

1. Objetivo

- Esta prática tem por objetivo aplicar os conhecimentos teóricos adquiridos, durante a disciplina de Microcontroladores, a respeito da programação e montagem de hardware na plataforma Arduino.

2. Equipamentos utilizados

- Arduino UNO R3;
- Protoboard;
- Resistores;
- LEDs;
- Botão;
- Sensor de temperatura TMP36.

3. Roteiro

Utilize o Arduino para desenvolver um sistema de alerta de um controle de temperatura. O sistema deve conter um sensor de temperatura, um botão e três LED's (um azul, um amarelo e um vermelho) devendo apresentar as seguintes características:

Em temperaturas entre -40°C e 25°C o LED azul deve permanecer totalmente aceso;
Em temperaturas entre 25°C e 60°C o LED amarelo deve aumentar seu brilho gradualmente conforme o aumento da temperatura;
Em temperaturas entre 60°C e 100°C o LED vermelho deve piscar à uma frequência de 5 Hz (5 vezes por segundo $T=1/f$) indicando alerta.

Se a temperatura ultrapassar os 100°C todos os LED's devem acender e o sistema deverá ser desativado.

O sistema só retornará quando o botão for pressionado e a temperatura estiver abaixo dos 25°C.

Considere uma variável de controle 's' para indicar o estado do sistema, onde $s = 1$ -> sistema ativo, $s = 0$ -> sistema inativo.

Utilize o canal serial para exibir a temperatura de leitura no monitor serial.

Utilize o sensor TMP36, disponível no TinkerCAD, para simular a variação da temperatura.

FEATURES

- Low voltage operation (2.7 V to 5.5 V)
- Calibrated directly in °C
- 10 mV/°C scale factor (20 mV/°C on **TMP37**)
- ±2°C accuracy over temperature (typ)
- ±0.5°C linearity (typ)
- Stable with large capacitive loads
- Specified -40°C to +125°C, operation to +150°C
- Less than 50 µA quiescent current
- Shutdown current 0.5 µA max
- Low self-heating
- Qualified for automotive applications

APPLICATIONS

- Environmental control systems
- Thermal protection
- Industrial process control
- Fire alarms
- Power system monitors
- CPU thermal management

GENERAL DESCRIPTION

The **TMP35/TMP36/TMP37** are low voltage, precision centigrade temperature sensors. They provide a voltage output that is linearly proportional to the Celsius (centigrade) temperature. The **TMP35/TMP36/TMP37** do not require any external calibration to provide typical accuracies of ±1°C at +25°C and ±2°C over the -40°C to +125°C temperature range.

The low output impedance of the **TMP35/TMP36/TMP37** and its linear output and precise calibration simplify interfacing to temperature control circuitry and ADCs. All three devices are intended for single-supply operation from 2.7 V to 5.5 V maximum. The supply current runs well below 50 µA, providing very low self-heating—less than 0.1°C in still air. In addition, a shutdown function is provided to cut the supply current to less than 0.5 µA.

The **TMP35** is functionally compatible with the LM35/LM45 and provides a 250 mV output at 25°C. The **TMP35** reads temperatures from 10°C to 125°C. The **TMP36** is specified from -40°C to +125°C, provides a 750 mV output at 25°C, and operates to 125°C from a single 2.7 V supply. The **TMP36** is functionally compatible with the LM50. Both the **TMP35** and **TMP36** have an output scale factor of 10 mV/°C.

Figure 3. R-8 (SOIC_N)

Figure 4. T-3 (TO-92)

The **TMP37** is intended for applications over the range of 5°C to 100°C and provides an output scale factor of 20 mV/°C. The **TMP37** provides a 500 mV output at 25°C. Operation extends to 150°C with reduced accuracy for all devices when operating from a 5 V supply.

The **TMP35/TMP36/TMP37** are available in low cost 3-lead TO-92, 8-lead SOIC_N, and 5-lead SOT-23 surface-mount packages.

4. Entrega do relatório

O relatório da aula prática deverá ser entregue com os nomes dos integrantes do grupo, os códigos aplicados e a conclusão.
